awards

*	NEW MUNICIPAL OFFICE LÁZNĚ BĚLOHRAD 2018 honorable mention collaboration with Ing. arch. Tomáš Zavoral
*	EU MIES YOUNG TALENT AWARD 2018 nomination + advancement to the second round with diploma project "The White Swan"
*	YOUNG ARCHITECT AWARD 2017 awarded by the rector of TUL for diploma project "The White Swan"
*	YOUNG ARCHITECT AWARD 2015 ERA21 prize for the project "Křižovnické Square"
*	JEŠTĚD F KLECI 2010 nomination for school project "Former Barracks Area in Uherské Hradiště"

competitions

2023	GRENSEN UTEN GRENSER I TRONDHEIM European competition, independent competition entry
2019	WATER FEATURE FOR HORNÍ NÁMĚSTÍ ZNOJMO independent competition entry
2018	ČESKÁ LÍPA LIBRARY collaboration with Ing. arch. Tomáš Zavoral
2018	FOUNTAIN ON KARLOVÉ SQUARE TŘEBÍČ collaboration with Ing. arch. Tomáš Zavoral
2018	NOVÝ MĚSTSKÝ ÚŘAD LÁZNĚ BĚLOHRAD collaboration with Ing. arch. Tomáš Zavoral honorable mention
2016	VÁCLAV DOLEJŠEK MONUMENT independent competition entry
2014	OUTDOOR SHELTER IN THE AVU GARDEN collaboration with MgA. Stanislavem Pechem winning proposal

In my role as a curator for ERA21 magazine, I proposed the thematic concept for an issue dedicated to department stores, developed together with the editorial team. The issue examined their past, present, and possible futures. I invited both local and international experts to contribute, particularly architects and architectural historians. I conducted interviews with Ippolito Pestellini Laparelli, long-time partner at OMA and founder of the studio 2050+, and with Astin le Clercq, a designer developing new retail typologies at MODEM.

Back in the 1920s, architect Leopold Bauer described the department store as a cornerstone of public life, a space where culture, fashion, and education converged. His vision went on to inspire numerous department store projects. In recent decades, however, many of these buildings have suffered neglect, marginalization, and a gradual functional and material decline marked by vacancies, disorder, and in some cases demolition.

Usually occupying strategic central locations, many of these buildings are considered iconic works of architecture as well as important reminders of past economic prosperity. Yet very few have undergone high-quality renovations that preserve their original purpose. Today, they must compete with depersonalized shopping malls and online shopping, which lack spontaneity, exploration, or any form of human contact.

We have reached a point where the entire concept of commerce deserves reexamination. It needs to evolve to meet the shifting needs of the market, of society, and of the city. This raises several fundamental questions: In the post-pandemic world, do people still value physical commercial spaces? Should cooperation between the private and public sectors support the creation of multi-use spaces for diverse activities? Is there a future for these former “temples of commerce” through preservation and revitalization, or are they approaching their end?

HLM ARKITEKTUR + HAWORTH TOMPKINS
2019 - 2024 | BERGEN

ROLE | EXECUTIVE ARCHITECT, BIM COORDINATOR,
PROJECT MANAGER IN THE DETAILED AND CONSTRUCTION PHASE

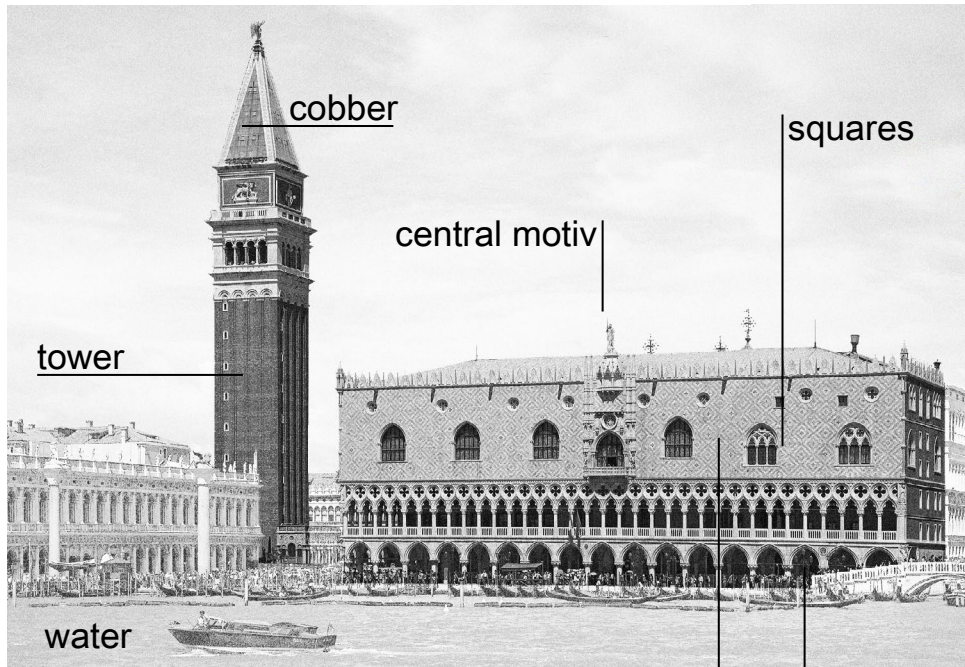

The project is a transformation of the former Sentralbadet municipal swimming facility in the center of Bergen into a new performing arts venue for contemporary theatre and dance. The building will become the home of Carte Blanche, the Norwegian national company for contemporary dance, and BIT Teatergarasjen, a leading platform for independent theatre.

The original modernist structure by architect Halfdan Grieg, inspired by the Doge’s Palace in Venice, is deeply rooted in local memory. The project therefore seeks a balance between the needs of today’s performing arts scene and the possibilities for preserving the historic structure - a balance that proved to be exceptionally fragile throughout the process.

The transformation opens the building toward Teatergaten and reintegrates the site into the active life of the city. The interventions build on the original geometry and architectural principles. Recycling and upcycling materials from the former baths preserve the memory of the place while giving them new meaning.

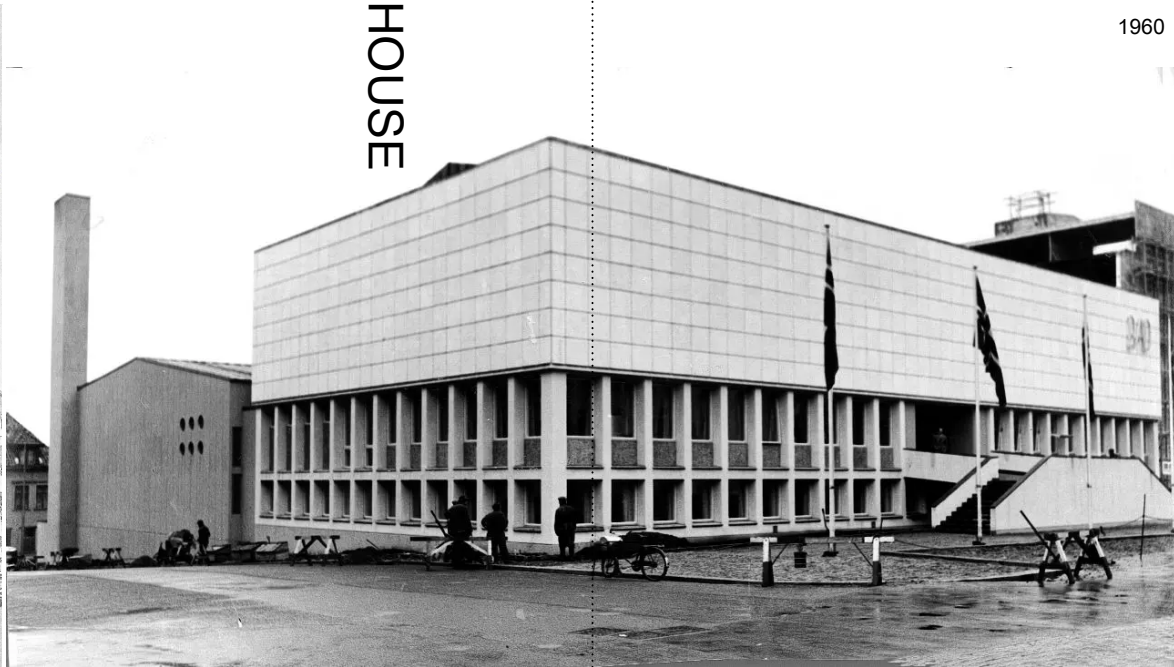

The building will offer two auditoriums (300 and 170 seats), two dance studios with capacity for around 100 spectators, workshops, and administrative spaces. The design emphasizes flexibility, functionality, and layered use, allowing the space to respond to the evolving needs of the performing arts and the broader community.

The aim of the project is to preserve the open, landscape-like character of the Vollane area in Eidsvåg instead of developing it with a spread of single family houses. The proposal therefore concentrates the built volume into a compact structure with a small footprint, leaving most of the site as publicly accessible green space.

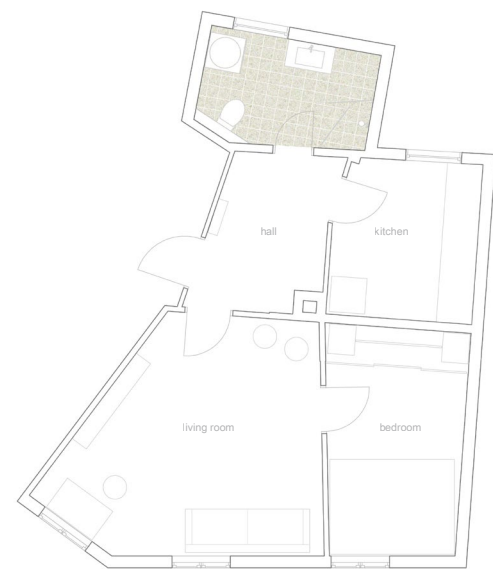

The housing is intended for people over 60. The goal is to create an environment that supports independence, social interaction, and active ageing. The complex includes 45 residential units of various sizes and shared facilities such as a dining room, reading room, cinema, gym with a small spa, and a healthcare section. It also incorporates publicly accessible functions such as a café, multipurpose room, workshops, and a hair salon, naturally linking the residents with the surrounding community.

The urban concept is based on the principle of klyngetun, a traditional Norwegian village structure that fosters neighbourly relations and visual connections to the landscape. The design emphasizes safe pedestrian routes, quality greenery, and shared outdoor spaces that strengthen activity, a sense of belonging, and overall well being.

POST-RENOVATION CONDITION

SANDVIKEN APARTMENT RENOVATION

OWN PROJECT
2020 - 2022 | BERGEN

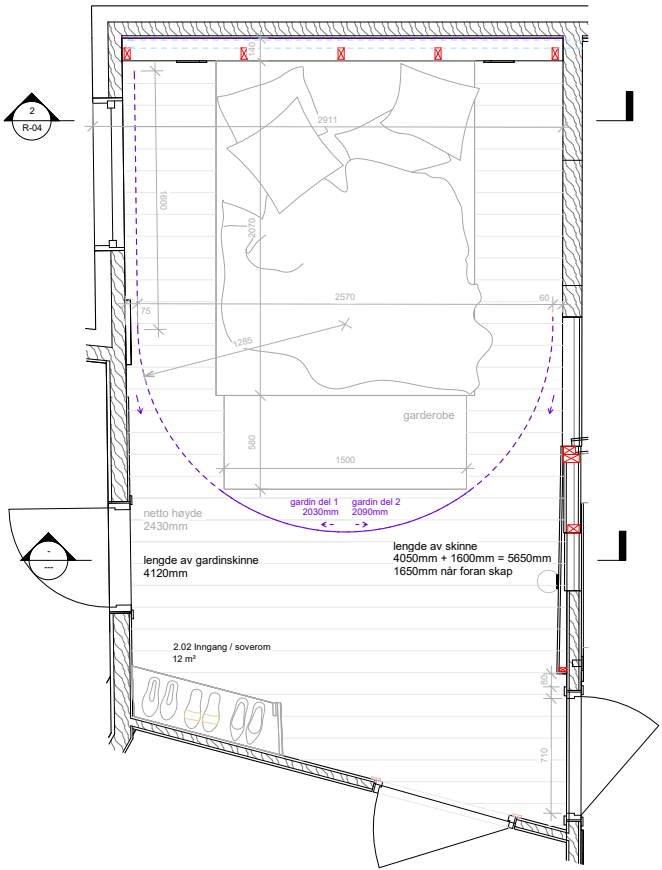

ROLE: ARCHITECT, INVESTOR,
PARTIALLY SELF-EXECUTED WORK

The renovation of an apartment in a typical historic timber building from 1892 was designed and initiated in 2020. The project emerged from a desire to gain a deeper understanding of traditional timber-construction principles and of the processes in which the architect is also the investor and (partially) the builder.

Once layers of later alterations were removed, the original timber structures, colours, and traces of use were revealed and became the basis of the design. By opening the layout and removing non-loadbearing partitions, the apartment gained a new spatial logic. Material from demolished walls was reused to create interior details. Re-use and upcycling played a key role here. A large part of the original materials (brick, tiles, flooring, light fixtures) also found new use outside the project.

The layout was adapted to contemporary living. The bedroom faces the quiet courtyard, the kitchen is connected to the living area, and the bathroom remains in its original location. After levelling the floors, a pine plank floor was reinstalled, restoring the interior's original character.

The project provided valuable experience working with historic timber structures. The realisation also includes bespoke furniture designed specifically for the apartment.

HLM ARKITEKTUR
2019 | KLEPPESTØ

ROLE: ARCHITECT / COLLABORATION
DURING THE COMPETITION PHASE

The task was to expand the original school building (today's north wing) with new classrooms, workshops, common areas, and a cultural hall so that the school would meet contemporary requirements for teaching and operation.

A key principle of the design was to make the workshops visible and spatially as well as visually connected to the rest of the school and to the public realm. The high demands for sound insulation and the need for large exterior areas with access for heavy vehicles led to the creation of two structurally independent volumes. The entire extension is built in solid timber construction, emphasizing the sustainability of the project.

A newly defined main axis begins at the entrance to the central building on the second floor and links all parts of the school both horizontally and vertically. The architecture itself provides intuitive orientation. Along this axis are located the administrative spaces, cafeteria, cultural hall, library, and access to classrooms and workshops.

The building was completed in 2023.

The legacy of the American shopping mall has crept closer to historic city centers. The large boxes built on suburban fringes have, in recent years, lost their appeal to consumers, and this shift has pushed them inward. Kilometers of shopping corridors, built on the principles of subliminal marketing and surface-level glitter, are now spilling into the urban cores. Made of drywall. Full of waste. Lacking any form of structure or oversight. Through their opacity and sheer spatial impact, these labyrinths are beginning to take over the role of open public space.

Beside them stand abandoned department stores with a clear position in the city, buildings that once defined the highest standard of quality. What future awaits them?

The project is divided into three parts: theory, process, and design. The design focuses on Bílá labut' (The White Swan), a functionalist department store from the 1930s. With critical distance and a touch of speculation, a fictional crystal palace rises on the roof of the original building. A newly erected tower reflects our present moment. The neon swan reaches heights where it encounters Prague's St. Vitus Cathedral. The outlines of former spiritual aspirations have been filled with the glitter of consumerism. Sacredness has turned into merchandise.

„Shopping is arguably the last remaining form of public activity.“

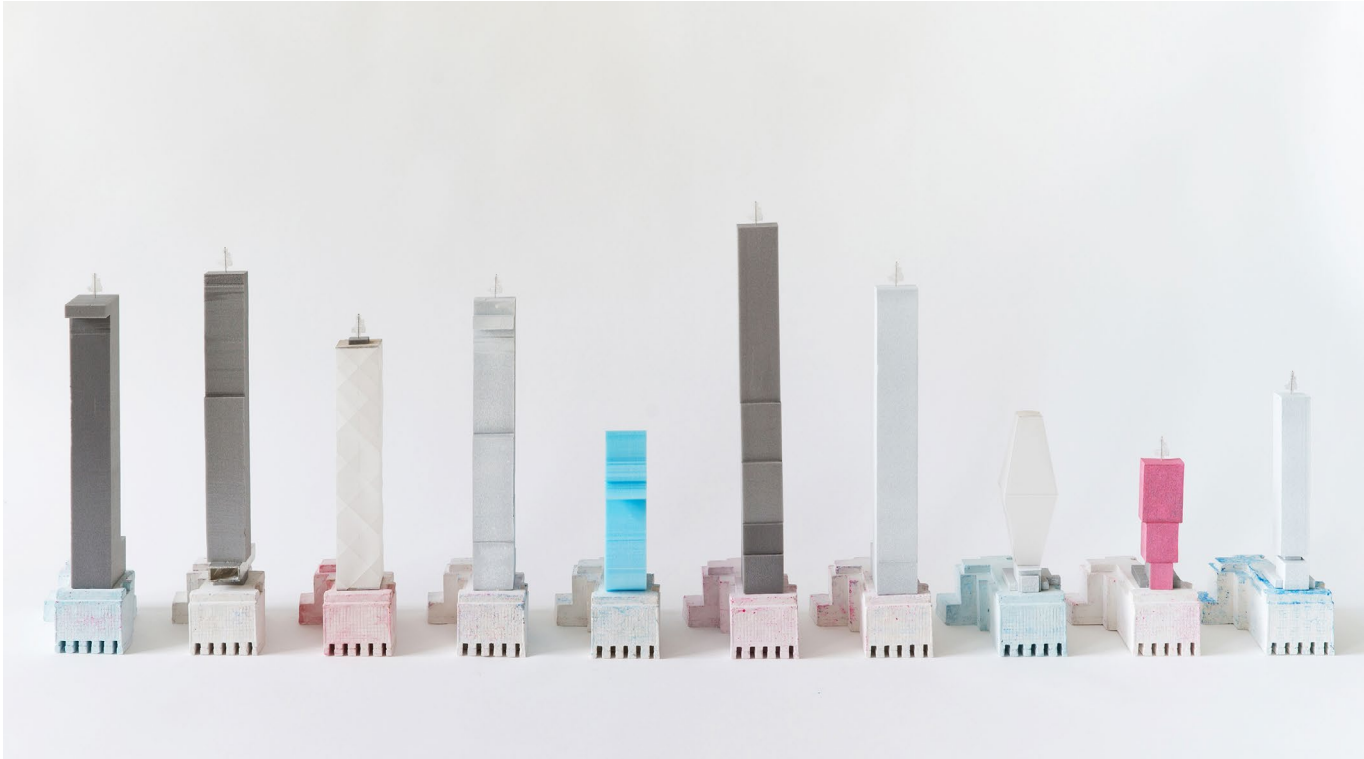

Chuihua Judy
Harvard Design School Guide to Shopping

DIPLOMA PROJECT

“From this perspective, display windows are becoming an increasingly important tool. Every specialized shop has its own dedicated display department. Paternoster displays have also already been introduced, a completely new feature that still requires further refinement.”

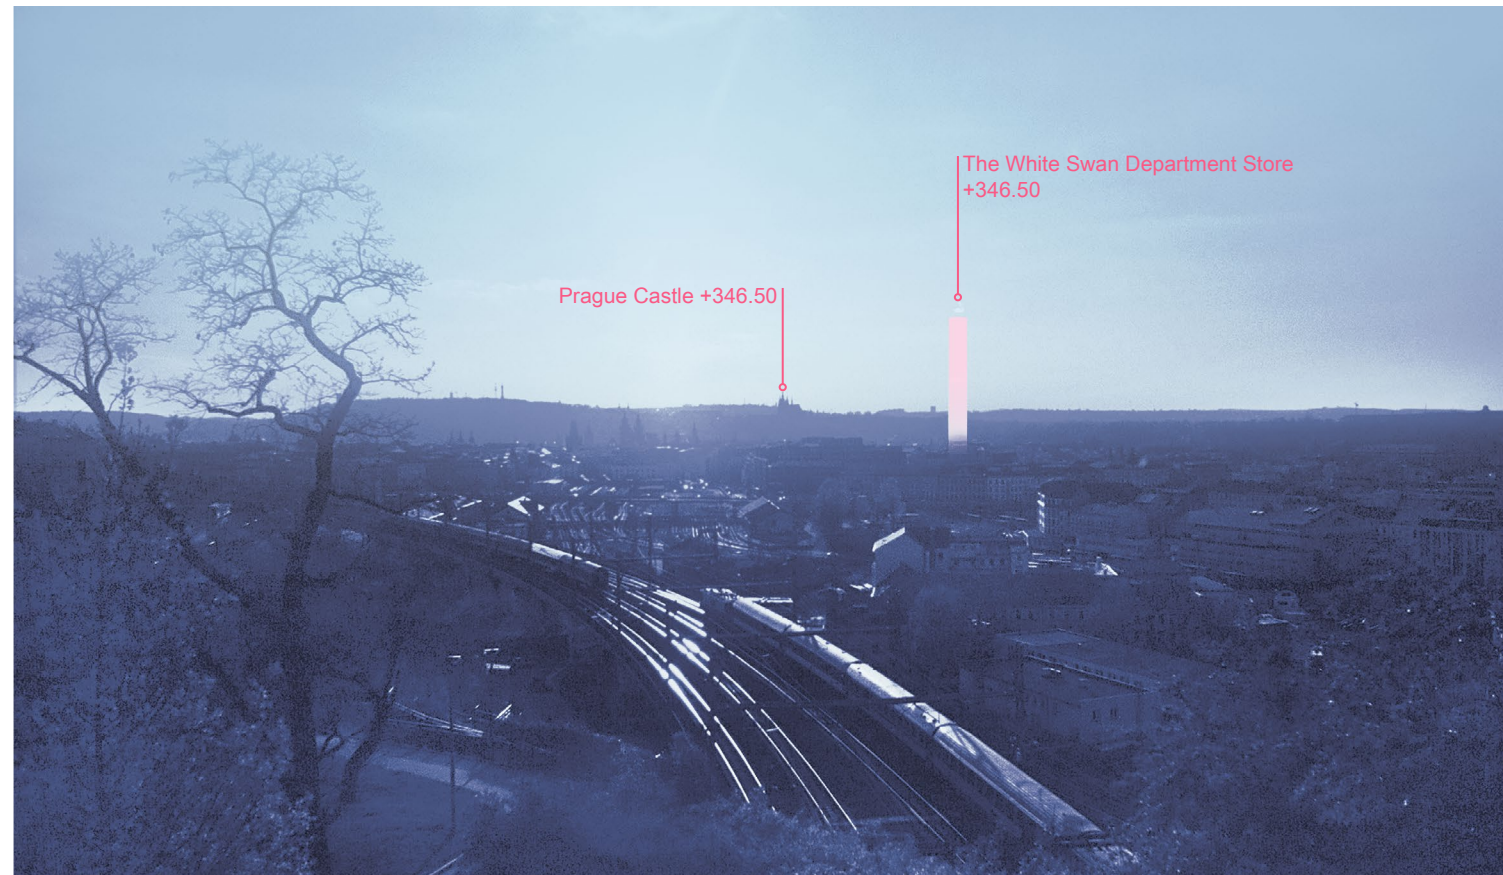

Josef Kittrich, From Retail to the Department Store

SECTION THROUGH THE DEPARTMENT STORE WITH PATERNOSTER

The outlines of former heights of faith have been filled with the glitter of consumerism.

“The house that Mouret created introduced a new religion.

His store gradually replaced the churches abandoned by a fading faith, otherwise souls would now remain empty.

Women came there to spend their free time, those trembling, restless hours they once experienced in chapels.”

Emilé Zola, *The Ladies' Paradise*

BERGEN - OSTRAVA | 2025
